## Revised Upwork Contract - Progress Updates Thread

Muhammad Ehsaan <ehsaanraheem99@gmail.com>  
To: DevinAnn Hartley <devinannh@gallo.legal>

Thu, 11/15/25

Hi DevinAnn,

Apologies for the delay in response.

Thank you for explaining with the example, I now have a clearer understanding of the program logic. I reckon I may have lost focus while scanning the literature.

I will start development tomorrow and do my best to submit a working program before the end of next week for you and your team to test and provide feedback. Meanwhile, I may reach small asks (access to APIs, queries, etc.) and a suggestion for the frequency regarding the data being pulled into the different google sheets.

I have submitted a proposal to the job offer you have sent me on Upwork, please feel free to take a look at it when you are able to.

If you happen to think of any additional improvements to the setup along the way, please let me know as it would be best to integrate while building the program. If any idea pops-up at n thing if you agree and approve it actually may add value for the team.

Regards,  
Ehsaan.

**Subject:** RE: Revised Upwork Contract - Progress Updates Thread

Hi Ehsaan,

Your project summary is correct. This program will be used by 2 users simultaneously. The program should support company growth in case we need to expand to 3 or 4 users at a t road.

**Q: Can you confirm which Google sheet the program should reference when scanning from the ASCII? Would it just be RB Pull for now? Would you prefer the program option to choose one, two or all three sheets to reference when scanning?**

A: The program will mostly reference the RB Pull sheet, but it will also reference the Firms/Contacts tab as well. Essentially, both sheets will be used every time. The Firm/Cont the information on the Appearance page (2<sup>nd</sup> page of the ASCII, sometimes extending across multiple pages). Everything else will come from the RB Pull sheet.

**Q: Could you please clarify the intended role of the Exhibits subfolder? For example — should the tool verify that the Exhibit file names match those listed within the transcript, or should it be a separate validation routine?**

A: Page 3 or 4 (approximately) of the ASCII/text doc is usually an "Index to Exhibits" with exhibit file names listed, and the page numbers where they were "marked" in the transcript. Below is taken from job #119698 (Sample #2 from the SF folder):

```

12
13             INDEX TO EXHIBITS
14 Plaintiff's
15 Exhibit      Description      Page
16 Exhibit 1    Medical Records    8
17
18             (Original exhibit attached to original
19 transcript.)
20

```

#### Exhibit Verification Process:

- Check for an exhibit parenthetical to 1) verify it is present and 2) determine how to proceed. In the example above, the exhibit parenthetical is "(Original exhibit attached to or transcript.)".
- Since the parenthetical indicates that the exhibit is "attached", the program should check the file(s) inside the exhibits folder.
  - If the parenthetical said "retained" instead of "attached", the program would verify that an exhibit subfolder does not exist.
  - A parenthetical saying "(None marked.)" is another indication to verify that an exhibit subfolder does not exist.
- In our example above, there is one exhibit listed – Plaintiff's Exhibit 1. The program will find the exhibits folder and verify whether the contents match the index. In the associated file, "Plaintiff's Exhibit 1". The reporter would show the user both of the following:
  - Exhibit Index Parenthetical = Present ☒
  - Exhibit Index Parenthetical matches Exhibit Files = Exact Match ☒
- Our example also shows that Plaintiff's Exhibit 1 was marked on page 8. The program should verify whether there is an Exhibit Parenthetical present on that page, and if so, whether the exhibit name/number matches.

```

2      Q      Wow.
3      MR. OLSON: At this time, Plaintiff offers
4      Dr. Mark Flood as an expert in the field of
5      orthopedic surgery.
6      (Plaintiff's Exhibit 1 was marked for
7      identification.)
8      Q      (BY MR. OLSON) So tell us -- we are going
9      to talk -- we are here today to talk about a gentleman
10     by the name of Michael Thomas, who was a patient of
11     yours. As far as -- can you tell us how -- and in
12     this particular case, what we know from the record --
13     and I am going to have the medical records from Ortho
14     Sport and Spine marked as Exhibit 1 to this
15     deposition.
16     And we will take a look at that. If at any
17     time during this deposition, Doctor, if you need to
18     look at the record, just let us know. And I will be
19     happy to pull that up for you. This is not a memory
20     contest. If you do three to 400 surgeries a year,
21     that is a lot of patients. But let me say -- let me
22     just start off. Typically, do you see patients -- in
23     this case Mr. Thomas was in an automobile accident.
24     The record tells us on March -- or I'm sorry
25     -- February 1 of 2022 -- 2023. February 1, 2023. And

```

#### \*Additional Notes on Exhibit Verification:

- Exhibit Folder Names
  - If a job has multiple witnesses/transcripts, the exhibits folders are typically labelled using the format "[Witness Last Name] Exhibits".
    - If one of the transcripts is a 30(b)(6) (meaning the witness was a company representative), it could be labelled "30(b)(6) Exhibits" or "[Company Name] Exhibits".
    - format for conformity/compatibility with this program, we can do that.
    - You can refer to folder "Sample 4 – Jon 119629" for an example of a 30(b)(6) transcript with exhibits.
- Exhibit File Names

- In our example above, I assume it would be easier on you to give the program leniency – for example, check for “Exhibit 1” instead of “Plaintiff’s Exhibit 1”. However, th where a transcript could have a “Defendant’s Exhibit 1” and a “Plaintiff’s Exhibit 1” are both used. It is not very common, but it happens.
- Most common exhibit names (excluding the number):
  - Plaintiff’s Exhibit... / Plaintiff Exhibit...
  - Defendant’s Exhibit... / Defendant Exhibit...
  - Petitioner’s Exhibit... / Petitioner Exhibit...
  - Respondent’s Exhibit... / Respondent Exhibit...
  - Court’s Exhibit... / Court Exhibit...

**Q: Where would you like the program to save the generated PDF? Would you prefer that the program automatically saves the generated PDF in the same job folder, or, custom destination folder (with an option to keep it static for future runs)?**

A: If the program can create folders, it would be ideal to have the generated PDF saved to a “QC Report” subfolder inside the job folder. If not, it can be saved to the main job

I don’t have a preference between starting with the design document or sharing it alongside the working version. Whichever method is easiest for you to make changes as needed is Elizabeth’s approval on next steps, and then I’ll follow up with you. I don’t anticipate her having any concerns, but I want to run it by her before we proceed.

Best,

Was your inquiry addressed promptly and satisfactorily?

Hi Christopher,

The freeze you encountered was likely due to the VM's limited resources. Running tests directly through the terminal has generally been smoother for me, but using the full Linux desktop environment may have exhausted the available resources and caused the I

You're correct — Linux relies on unixODBC for DSN and ODBC configuration. I've already installed and tested it using both pyodbc and sqllcmd, though as you know, the connection hasn't yet succeeded.

To make this easier, I'll set up a higher-spec Windows VM so you can use the native ODBC Data Sources tool that you're more familiar with. Once the diagnosis is complete, I'll reduce the VM's resources to keep costs efficient since its main purpose is only to run

I expect to have this prepared and ready either by end of day today or tomorrow, and I'll share the access details with you as soon as it's set up. That way, you can begin your testing when you're back on Monday.

Meanwhile, have a great weekend.

Regards,  
Ehsaan

\*\*\*

**Muhammad Ehsaan**

Hi Christopher, The new VM with increased resources has been set up. PFA the TeamViewer connection details for it. Please note that ODBC Driver 18 and Sqllcmd ut

Also, please never hesitate to reach out regarding any technical specifications or system queries. It's absolutely your right to understand how everything operates, and my role is to ensure every component is explained clearly and in plain language. I truly appreciate your engagement, and I do my best to ensure my responses are educational and transparent for your understanding.

Thank you for sharing the detailed context, files, and your comprehensive responses. Based on what I've reviewed so far, here's my understanding of the project scope and structure.

**Project Summary (My Understanding)**

The program will take three data sources —

- 1. The ASCII text file (or transcript)
- 2. The Job Notice PDF file
- 3. The RB Pull data (from Google Sheets)

It will compare the relevant fields from the ASCII between one or either remaining source(s), generate a resulting PDF report which classifies each field as:

✔ Exact Match | ● Partial Match | ● No Match

**Proposed System Design**

The solution will include both a front-end and back-end, hosted locally on a workstation. Since two team members will be (simultaneously) using it, it will run independently for both — maintaining resource and user independence.

The front end will include:

Drag-and-drop and file path options for the .pdf and .txt/.docx files.

Once tested, it will also allow the user to input a folder path directly (e.g., S:\EG Jobs\2025\09 - September\September 03 – Clark), from which both the text and PDF files will be automatically scanned and processed.

**Q & A**

As for the the answers you've given to my questions:

- *Included in the ShareFile folder (linked below) is a zipped folder containing the files he provided when a demo was requested. I'm unsure how useful they will be – I could not as intended. I stopped receiving communication from him when trying to resolve the demo issue.*

Received, I have and will continue to study these.

- *The RB data extraction has already been completed. This project uses the "Firms/Contacts" and "RB Pull" tabs of the Initial QC Automation Sheet that you set up for us. Let me know if I misunderstood your question.*

Thank you for confirming, I see that those pulls contain the same data that this project's program would require to scan/parse. Can you confirm which Google sheet the program should be scanning from the ASCII? Would it just be RB Pull for now? Would you prefer the program to allow the user the option to choose one, two or all three sheets to reference when scanning?

- *All files are manually uploaded and stored in our local "Shared" (S:) drive – details below. Each job has a folder (titled with the job date & witness's last name), within the Exhibit hierarchy: S:\EG Jobs\2025\09 - September\September 03 – Clark S:\EG Jobs\2025\09 - September\September 03 - Clark\Exhibit We originally envisioned an executable file that would allow the addition of a bonus component (not required but would be a wonderful bonus). Bonus component: the solution also validates the associated exhibit files. These are stored in an "Exhibits" subfolder inside the same local job folder. These can also be dragged & dropped with the other files if we go that route...Very open to suggestions on the best approach.*

"S:\EG Jobs\2025\09 - September\September 03 – Clark" This would be an example file path which contains both the job notice .pdf and the ASCII .txt. It would be ideal to have the program verify that the Exhibit file names match those listed within the transcript, or perform a separate validation routine?

- *A downloadable PDF will probably meet our needs best since the data does not revolve around numerical data.*

Where would you like the program to save the generated PDF? Would you prefer that the program automatically saves the generated PDF in the same job folder, or, the user select a folder (with an option to keep it static for future runs)?

- *I believe a semi-automated tool is best – the trigger being either A) drag and drop files or B) copy/paste the file path.*

Understood.

### Next Steps

Would you prefer that I:

Prepare a detailed design document (with diagrams and interface mockups) first for your review,  
or  
Proceed directly with development and share the documentation alongside the first working version?

As for the costing, I estimate this to be ~8 business days from when I begin. If we proceed the hourly way, it'll be 64 hours x \$28 = \$1792. If you wish to proceed with the fixed - price \$ 1700 to assist in covering for other fees you might incur as previously discussed.

Regards,

Ehsaan.

On Tue, Nov 4, 2025 at 3:10 AM DevinAnn Hartley <[devinannh@gallo.legal](mailto:devinannh@gallo.legal)> wrote:

Hi Ehsaan,

I appreciate your response, though the images "cannot be displayed". Typically, I can right-click and there will be an option to download images, but I don't have that option for t wouldn't be surprised if I was wrong about the OS configuration. I do my best to keep up, but these things are well outside my expertise. Thank you for confirming; I've relayed th you provided earlier to Amit.

Wonderful to hear that this aligns with your experience! Answers to your questions are below:

1. Are there any documents, scripts or prior work files I can go through from your or the previous developer's side?

Included in the ShareFile folder (linked below) is a zipped folder containing the files he provided when a demo was requested. I'm unsure how useful they will be – I could work as intended. I stopped receiving communication from him when trying to resolve the demo issue.

2. For the RB data comparison — would you like the extraction to be done via direct SQL access, browser automation, or a data export file (e.g., CSV/Excel)?

The RB data extraction has already been completed. This project uses the "Firms/Contacts" and "RB Pull" tabs of the [Initial QC Automation Sheet](#) that you set up for us. Le misunderstood your question.

3. Are the text documents and PDFs stored in a shared drive, internal system, or are they uploaded manually to a folder location?

- All files are manually uploaded and stored in our local "Shared" (S:) drive – details below.
  - Each job has a folder (titled with the job date & witness's last name), within the
  - Example of folder hierarchy:
    - S:\EG Jobs\2025\09 - September\September 03 – Clark
    - S:\EG Jobs\2025\09 - September\September 03 - Clark\Exhibit
- We originally envisioned an executable file or website for my team to drag and drop the associated files for comparison. If you're able to configure a solution so that the us path to that local job folder instead of uploading the documents, that would allow the addition of a bonus component (not required but would be a wonderful bonus).
  - Bonus component: the solution also validates the associated exhibit files (typically PDFs). These are stored in an "Exhibits" subfolder inside the same local job folder. dragged & dropped with the other files if we go that route...Very open to suggestions regarding the best approach.

4. What's the expected output format for the QC report — a downloadable Excel/PDF, or a dashboard view in Google Sheets or Looker Studio?

A downloadable PDF will probably meet our needs best since the data does not revolve around numerical data.

5. Would you like this to be a fully automated workflow (scheduled runs + email alerts) or a semi-automated tool where a user triggers comparisons as needed?

I believe a semi-automated tool is best – the trigger being either A) drag and drop files or B) copy/paste the file path.

In summary, this project is to build a reusable tool that two team members can use multiple times per day. We receive job notices (PDFs) from the client and ASCIIs (text files) from The tool should compare the ASCII contents against both the notice and the RB data to verify fields such as witness name, attorney/contact information, and other case details. Sc come only from the PDF, some only from RB, and some can come from either source.

The output should be a report (likely a downloadable PDF) that shows each field and whether it was a true match, partial match, or no match to the appropriate source(s). Partial a be clearly highlighted so the user can see what requires follow-up.

This is the ShareFile folder I created for the previous developer. It contains several example documents, as well as the demo files he provided. <https://gallo.sharefile.com/public/shs7ee08e1a95f249509ba7be4ab5d973f9>

Google Doc outlining which portions of each text document should map to which source. The "Report docs" tab is from the previous developer. It contains his questions and my a there in case you find it helpful. It can be ignored if not. [https://docs.google.com/document/d/1plvZD2qtDdPXxXny49vijet3EX3SVTU8\\_Cs6fZU7Jkl/edit?usp=sharing](https://docs.google.com/document/d/1plvZD2qtDdPXxXny49vijet3EX3SVTU8_Cs6fZU7Jkl/edit?usp=sharing)

Take your time reviewing the documents and then let me know your thoughts. I'd like to approach this in a more structured way. If you think a fixed-price arrangement is feasible, not, please provide an estimated project timeline, expected hours per week, your hourly rate, and any additional resources or costs we should anticipate so we can scope the tota

**To:** DevinAnn Hartley <[devinannh@gallo.legal](mailto:devinannh@gallo.legal)>  
**Subject:** Re: Revised Upwork Contract - Progress Updates Thread

Hi DevinAnn,

That shouldn't be the case — the VM's OS was configured as Windows, not Linux. You can confirm this by opening the VM details in the GCP Console and scrolling slightly down where the OS and OS Version are listed, like so:

This has also been mentioned in the 'RB Pull Documentation' file. Moreover, I can confirm that since September, any and all VMs we've used for automation have been Windows

Regarding your upcoming QC automation project, yes — this does fall within my scope. Before moving ahead, I just wanted to clarify a few points to ensure I plan the approach c

1. Are there any documents, scripts or prior work files I can go through from your or the previous developer's side?
2. For the RB data comparison — would you like the extraction to be done via direct SQL access, browser automation, or a data export file (e.g., CSV/Excel)?
3. Are the text documents and PDFs stored in a shared drive, internal system, or are they uploaded manually to a folder location?
4. What's the expected output format for the QC report — a downloadable Excel/PDF, or a dashboard view in Google Sheets or Looker Studio?
5. Would you like this to be a fully automated workflow (scheduled runs + email alerts) or a semi-automated tool where a user triggers comparisons as needed?

Once I have this clarity, I can outline a solution — whether purely Python-based (using OCR + text parsing libraries) or integrated with Power Automate or any other automation t workflows.

Regards,  
Ehsaan.

On Mon, Nov 3, 2025 at 8:49 PM DevinAnn Hartley <[devinannh@gallo.legal](mailto:devinannh@gallo.legal)> wrote:

Hi Ehsaan,

Thank you for the details; I appreciate it. It looks like the existing VM is Linux-based rather than Windows; would that affect how the issue should be resolved?

I also wanted to touch base about a potential next project related to the RB data pulls and Google Sheets setup you built. I previously had another developer working on this a (prior to hiring Faaz), but I haven't heard back from him in over a month now. At this point, I'm ready to move forward with another developer to get it completed.

Below are the details from the original posting — I haven't reopened it on Upwork yet, but wanted to confirm whether this would fall within your scope:

**Project Summary:** I need an automation expert to develop a solution that compares text documents, PDFs, and data from ReporterBase to streamline the quality control proce

- Extract text from PDFs and compare it with corresponding text documents.
- Cross-check Text Documents with entries in ReporterBase.
- Highlight discrepancies for review.
- Generate a QC report.

Ideal candidates should have experience with:

- Python, Power Automate, or other automation tools.
- OCR (Optical Character Recognition) for PDF text extraction.
- Working with limited API integration websites (ReporterBase data can be extracted, if needed)
- Data comparison and report generation.

Best,

Was your inquiry addressed promptly and satisfactorily?

**Subject:** Re: Revised Upwork Contract - Progress Updates Thread

Hi DevinAnn,  
  
Hope you're well.

I wanted to share some context and possible next steps regarding the installation restriction Amit encountered on the VM ("This installation is forbidden by system policy").

To move forward, here are the available approaches you can take as the project owner:

**1. Temporarily elevate Amit's permissions inside the VM**

- Please ask Amit to confirm if his account has admin privileges inside the Windows VM or not.
- If not, from the GCP Console → Compute Engine → VM Instances → Set Windows password.
- Assign Amit local Administrator credentials.
- This will allow him to install Python and related dependencies directly.
- Once configuration is complete, permissions can be reverted.

**2. Adjust the OS Policy from GCP**

- Navigate to Compute Engine → OS Policies.
- Locate the policy bound to this VM (if any) and disable rules that restrict software installations (e.g., Windows Installer or Group Policy restrictions).
- This keeps overall access controlled while allowing installations to proceed.

**3. Use a startup script or custom image (recommended for restricted environments)**

- You can add a startup script under the VM's metadata to automatically install Python and dependencies at system startup.
- This approach maintains existing user restrictions while enabling the setup to complete automatically.
- Since I no longer have access to the project, Amit can confirm and proceed with the exact script needed for this setup.

I've outlined all possible steps to resolve the issue based on the system and policy behavior. You may discuss these with Amit and proceed with whichever suits the team best.

Regards,  
Ehsaan.

Hello Elizabeth / ES Faaz,

We have reviewed the email thread and conducted some initial research on our end. Based on our understanding, to establish a connection with the RDB database, we will need the following details:

- Database Name: RDB-13914-01 (corrected please confirm)
- Username and Password
- IP Address: 35.232.178.164 (as mentioned in previous communication)

Before proceeding, could you please confirm the following:

1. Does the IP address 35.232.178.164 belong to a cloud server or an on-premise environment?
2. Is it possible to connect to this IP via SSH, or if it is a virtual machine (VM), can we connect directly to it?
3. We are assuming that RDB-13914-01 is the correct RDB database name, please confirm if this is accurate.

If the IP 35.232.178.164 is accessible from CIS, we can proceed to test the RDB connection using the same, without requiring any new IP to be whitelisted at this stage. Additionally, please share the database username and password for RDB-13914-01, so that we can initiate the connection testing.

Thanks  
Amit P

I realize you're not included in the current email thread, but since you have the complete handover documentation, would you prefer to forward it directly to the developer you like me to share it by looping in my actual email?

Additionally, I noticed that Elizabeth looped in the email address originally created for Faaz instead of my actual one (the same I'm writing from now). Could you please or any misunderstanding about the project ownership or my role in its completion?

Lastly, I just wanted to check if there's any update on the future SQL pull tasks. You had kindly mentioned that I may be reached out regarding future pull requests. I resp to move in a different direction, and I'd really appreciate any feedback on how I could improve or better align with your expectations going forward.

Please let me know how you'd like to proceed — happy to assist in any way needed.

Regards,  
Ehsaan.

Hi Ehsaan,

Thank you for the update -- no apology necessary. I've removed your access from the GCC.

I want to thank you for your hard work and dedication. This project had a very bumpy start with Faaz, but I can't tell you enough how much I appreciate you not aband when you weren't being paid promptly. I've marked this contract as completed on Upwork and left a brief, but positive review.

You may hear from me again in the not-so-distant future, but I wish you well until then!

Best,  
DevinAnn

Hi DevinAnn,

Apologies for the delay in getting back to you — it's been quite a demanding week.

I've now logged all hours as discussed, and the ones recorded this week will be billed starting next week.

At this point, the automation is fully in place and operating independently within your environment. To complete the handover, could you please revoke my access to th (from the navigation bar on the left), the same way it was originally assigned? This will confirm that ownership rests entirely with you. I'll continue monitoring over the w you with a final confirmation update on Monday.

Please don't hesitate to reach out if you have any questions or additional requests.

Regards,  
Ehsaan.

On Mon, Sep 29, 2025 at 5:19 PM Muhammad Ehsaan <[ehsaanraheem99@gmail.com](mailto:ehsaanraheem99@gmail.com)> wrote:

Hi DevinAnn,

Hope you're well.

I just wanted to update you to know that I have been able to log **165** hours as of last week. My timezone makes it unfavourable to log all hours and hence missed ou hours.

I plan to log the 3 hours with the remaining 24, adding up to 27 hours for this week, awaiting entry. This brings the total to 165 (last week) + 27 (this week) = **192 ho**

You may decrease this week's limit accordingly if you wish. The remaining logs will be done by the time you start tomorrow and be ready to view.

Regards,  
Ehsaan.

Hi DevinAnn,

Thank you for the update.

I will log 168 hours in total by this weekend and the remaining 25 hours by the start of next week and let you know.

You may then mark the project as complete and it is no problem at all, after all, it is a limitation imposed by Upwork.

Have an amazing weekend.

Regards,  
Ehsaan.

Hi Ehsaan,

Thank you for confirming. I've raised your weekly limit on Upwork; the changes should go into effect immediately. Please note that I couldn't raise the limit bey snippet below). Unfortunately, the remaining 25 hours will have to be billed next week. I apologize for the inconvenience, but I appreciate your patience.

Change weekly limit

×

Set or change the number of hours Muhammad Ehsaan can work per week. You will not be billed for hours logged above this limit. [Learn more](#)

Weekly limit

Limit to:

193

hrs per week

Do not limit hours

Limit must be an integer number between 0-168

When will these changes take place?

Decreases will take effect on Sep 29.  
Increases will take effect immediately and is retroactive to Sep 22. All hours logged after this date will be applied to the new limit.

Hi DevinAnn,

That's great.

Correct. As of now, all hours that have been logged into the timesheet only represent the hours worked for that respective week.

Regards,  
Ehsaan.

Hi DevinAnn,

Apologies for the delay in response, and thank you for your patience.

I truly appreciate your understanding, and I'll do my best to ensure smoother agreements in the future so that you can benefit from reduced avoidable exper

PFA an automated email alert generated by the Exhibit script. If you haven't received a similar email in your inbox, please check your junk/spam folder and r if that option appears. For testing purposes, I intentionally relocated the authentication JSON file so the script would encounter an error and trigger this alert

If you'd like any adjustments to the subject line or body of the alert, please let me know. I've also prepared a list of potential errors within the script (though u with their probable causes, to simplify any future troubleshooting if needed.

The remaining two scripts are being converted in the same way, and you can expect additional test emails from each of those shortly.

Regarding hours logged:

- For the week of **9/8–9/14**, Upwork shows **40 manual hours + 120 overtime hours**, correctly as per your email.
- As I noted in my September 9th email (attached):  
*"The hours I've logged (both within the weekly limit and as overtime) reflect only that one month's contribution. They are separate from last week's ac been recorded solely to provide full transparency."*
- While Upwork separates them into "within limit" and "overtime," the total (160 hours) reflects one full month's contribution. Since they haven't been in hours are tied to that week specifically, as with prior weeks.

For the current week, I will log 32 hours only, since delivery was committed for yesterday. Adding this to the 160 logged hours brings the total project contrib Please confirm if Upwork can accommodate this for the current week, and I'll log accordingly.

I'll also share the complete documentation once the remaining two scripts are finalized.

Regards,  
Ehsaan.

Hi Ehsaan,

I can understand your priorities with using Upwork. We will keep you in mind the next time we have a similar project, and we can explore fixed payments i we deem that option to be more beneficial for both sides.

For this past week (9/15-9/21), Upwork shows 32 manual hours (no overtime logged):

Sep 15 - Sep 21

For the week 9/8-9/14, Upwork shows 40 manual hours + 120 overtime hours:

Sep 8 - Sep 14

For the week 9/1-9/7, Upwork shows 40 manual hours (no overtime logged):

Sep 1 - Sep 7

Please let me know if something doesn't align with your records.

Best,

Hi DevinAnn,

Thank you for confirming the IAM permissions – much appreciated.

Just to clarify one point: I had logged the unrecorded month for 160 hours (40 × 4 weeks), rather than 120. Could you kindly confirm? I'm aiming to hand the end of the week – ideally Thursday – and will also confirm the exact hours I've worked then, so there's no possibility of any overcharge on your end.

Regarding future contracts, I truly value the opportunity to continue working with you. It's also beneficial now that I have a strong understanding of your bi architecture, which puts me in a better position to deliver value on possible upcoming projects without the typical onboarding curve.

To be transparent, I'm not a big fan of Upwork myself because of the multiple fees I incur, but I'd still prefer to continue there for the time being since it he and have my revenue recognized on the platform. That said, if platform fees ever become a concern, I'd be happy to adjust future contract terms to keep sides. And if at any point it makes more sense to consider alternatives, I'd be open to that discussion as well.

Looking forward to your thoughts.

Regards,  
Ehsaan.

Hi Ehsaan,

Thank you for your thoughtful response. The email [Gallo.alerts123@gmail.com](mailto:Gallo.alerts123@gmail.com) has been added to the IAM permissions.

If you plan to fully hand off and mark this project as completed by the end of the week, I can raise your weekly hour limit on Upwork. Just let me know plan to bill for this week, and I'll add to it the 120 hours from the unrecorded month. Neither Elizabeth nor I could find a way to approve the overtime t sincere apologies for the inconvenience.

I also have a question regarding future contracts – would you be open to working with us outside of Upwork? This is purely hypothetical for now; I don in mind, but we do need SQL pulls on a fairly regular basis. We'd prefer to continue working with someone we trust rather than bringing in new people a contract outside of Upwork is simply to avoid platform fees, which could make it easier to find a fair arrangement on cost/payment. Let me know you
